METAL REPLACEMENT TILES
PRODUCT CATALOGUE

The technically correct combi

With VSM roof hooks & metal replacement tile for installation without flexing

Thanks to the varista® VSM roof hook in conjunction with the metal replacement tile, there is no need for flexing, so rain penetration resistance is guaranteed.

You can find more information on the metal replacement tile in our separate catalogue.

VSM

VSM-Roof Hook
Connecting bolts M10 x 25

The VSM roof hook was specially designed for combination with metal replacement tiles and offers the perfect connection of a photovoltaic system on a pitched roof with tile covering without tile preparation (flexing). This is an immense time saver and, above all, there are no problems with tile breakage and warranties.

During installation, a tile is removed from the roof and replaced with a metal replacement tile. The VSM roof hook is then attached to the rafters. The EPDM tape already glued to the underside of the VSM roof hook also provides excellent protection for the metal replacement tile underneath.

Advantages at a glance: VSM roof hooks

- Specially developed for on-roof tile installations with metal replacement tiles
- Variable neck height of 38-50 mm for even more flexibility on the roof
- No flexing, hammering or machining of the roof tiles
- No damage to the roof tiles
- Up to a third faster installation time
- No sanding dust from flexing on the construction site
- Adapters for mounting rails from other manufacturers available

Successful without flexing, thanks to the combination of VSM roof hooks and metal replacement tiles
